

Wireless all-round keyboard for multimedia applications

Ahrensburg, May 2010:

For years the brand *KeySonic™* has been standing for out of the ordinary input devices – keyboards and mice with a twist. Our new keyboard the **KSK-5200 RFM** is no exception; outwardly it attracts attention by shapely curves while inside it is packed with many useful extras.

Its dimensions of 388x42x185mm along with normal key size allow it to retain old writing habits. Despite the space-saving design it does not lose the full functionality of a full-sized keyboard. As with all the *KeySonic™* wireless keyboards the KSK-5200 RFM offers a location-independent radio operation without cumbersome cable connections. A distance up to about 10m to the PC is possible with reliable 2.4 GHz radio transmission.

For mobile use a large optical trackball is built-in as a mouse replacement on the right. It has a diameter of 19mm and works with fast and precise scanning of 800 dpi. The trackball is complemented by two mouse buttons with a scroll wheel on the left hand side of the keyboard. Two additional mouse buttons have been placed on the bottom left and right edges of keyboard for a smooth files and internet browsing experience.

On the lowest key row, a rather unusual key is located: the MCE button. It opens the Windows Media Center (if installed), which is integrated by default starting from Windows7.

Above the Function keys 12 multimedia keys and a red LED low battery indicator are located. The five left buttons act as *Internet hotkeys* and open your e-mail client, internet browser and my computer as well as the previous and next pages. As second assignment they simplify the operation of the Media Center (if installed) as *MCE hotkeys* while when pressed together with the *Fn* key it will open the default applications for Internet TV, music, photos, videos and the TV player. The other 7 buttons are *multimedia hotkeys* for regulating the volume, start and stop the media tracks and select the previous or next track.

With the many special features, the KSK-5200 RFM is optimal for controlling modern home entertainment systems, for mobile applications, as well as for training, conference & presentation rooms. As already known from all the previous *KeySonic™* devices, the key stroke is silent due to high quality *Soft-Touch* membrane technology and with a pleasant pressure point.

KeySonic™ KSK-5200 RFM is delivered in an attractive retail packaging in red *KeySonic™* design. It is marketed exclusively by MaxPoint Handelsgesellschaft mbH and is available in specialised shops for a recommended retail price of 49 € (incl. VAT) starting now.
