Dortmund / Stockholm, Juni 2008:

Process Relations introduces XperiDesk at Replisaurus Technologies

Process Relations establishes the Process Development Execution System (PDES) at the developers of the patented ECPR™ Technology.

The structured IP transfer becomes a predominant competitive advantage in the semiconductor industry due to the rising complexity of the manufacturing processes. "With the structured preparation and improved access to our development and experimental data, we expect an accelerated and better documented roll-out of our ECPR™ technology," says Patrik Möller, founder and VP Technology Integration of Replisaurus Technologies. "In addition we expect a significant improvement in sales due to the transfer of manufacturing recipes from our machines to the systems of our customers with the use of XperiShare. This provides us with a clear competitive advantage in the market of machines for semiconductor manufacturing," says James Quinn, CEO of Replisaurus Technologies.

The conceptual features of the XperiDesk Software Suite provide valuable contributions in all phases of the development of high-tech manufacturing processes like the ones used in the semiconductor industry. "Our software allows our customers to make their ideas reproducible", states Jens Popp, Senior Application Engineer of Process Relations. "It structures the development from initial concept to the transfer of the manufacturing process into the production and can be easily adapted to methods and environments of the customers", says Dirk Ortloff, CTO of Process Relations. "One of the key advantages of our product is the support for audit trails and compliance fulfilling documentation of development results, the simplification of IP-Transfers and the more efficient transfer of development results into mass production".

About Process Relations GmbH

Process Relations GmbH is a software technology company and positions itself as the standard provider for Process Development Execution Systems (PDES). With its software suite XperiDesk it offers the first tool in the market for structured management, virtual prototyping and process data transfer supporting different high-tech industries. Next to the development, sales and support of the PDES software, Process Relations GmbH offers consulting services for companies performing high-tech developments, especially in the areas of process development and product engineering.

About Replisaurus Technologies

Replisaurus Technologies is providing the electronics industry with revolutionary high accuracy cost effective metallization solutions. The patented ElectroChemical Pattern Replication - ECPR™ technology redefines the basis for cost and time effective fabrication of micro- and nanoscale metal layers, offering manufacturers of advanced packaging, substrates, optical components and semiconductor devices a high performance alternative to photolithography based processes.
