+ + + + + + + + New CombiTac module for data transfer + + + + + + + +

The modular connector system CombiTac by Multi-Contact has been enriched by a new optical fibre connector for data transfer. The new component was introduced to the public at the Hannover Messe 2010, and was met with great interest by the professional visitors.

Glass Optical Fibre (GOF)

New 4-pole connector for Ø 3mm mono- or multi-mode optical fibre.

Fibre types:

- Graded index fibre (GI): 50/125 and 62,5/125µm
- Single mode fibre (SM): 9/125µm

Optical fibres are used wherever data transfer is required, e.g. in automated processes and machines, in medical technology (computer tomography), in the railway industry (control and passenger information systems), and in many other fields of application.

Technical details are listed in the new flyer F CombiTac.
