

We are happy to
invite you to:

edaBarCamp

1st Contact

17./18. November 2016
Leibniz University Hannover (LUH)
Institute of Microelectronic Systems (IMS)
Hannover Germany

You do research in the area of electronic design automation (EDA) for microelectronic and embedded systems?

You want to present and discuss ideas and results of your ongoing scientific work?

Then come to Hannover!

The edaBarCamp offers an open space and is detached from a formal event structure. You are the program committee, propose sessions and lead them. In the sessions, we will interactively propose, exchange and jointly develop our methodological approaches and innovations. Meeting and discussing on a par with each other, your individual work and interests will benefit from the others.
