

SILKYPIX Developer Studio Pro 6 – High-speed RAW development with optimised workflow and integrated colour management for editing and printing

The latest version of the universal RAW converter for professional RAW editing includes a new user interface and correction function for portraits as well as improved noise reduction.

Venlo, NL / Chiba, Japan | 20. March, 2014 - Ichikawa Soft Laboratory Co. Ltd today released SILKYPIX Developer Studio Pro 6, the latest version of the RAW converter for developing and editing images with the greatest possible precision. SILKYPIX Developer Studio Pro 6 includes high-speed reading of RAW data in different formats, functions for sensitive image editing, a high-resolution image processing engine with optimised algorithms and a wide range of support from editing to printing.

Adjusting the work environment for monitors and a new easy-to-use interface

SILKYPIX Developer Studio Pro 6's completely revised user interface makes frequently used editing functions easier to access for an optimised photographic workflow. The editing environment can also be adjusted to fit a wide range of different displays and monitors from notebook computers to large LCD monitors.

Quick processing speed for high resolution and improved noise reduction

SILKYPIX's "smooth harmony", "high resolution" and "excellent colour reproduction" features enable users to generate the best images without any loss of quality. The "NR5" algorithm has been installed in the latest version of SILKYPIX Developer Studio Pro, improving the quality of images during noise reduction.

Softproof function for colour management and true-colour print results

For true-colour results, a new function has been added to SILKYPIX Developer Studio Pro 6 for colour management while editing on a monitor and for printing. By designating a colour profile in ICC standard format, print warning displays simulate printing on your monitor to enable you to regulate colour and generate true-colour print results.

Overview of new functions in SILKYPIX Developer Studio Pro 6:

- Easing low frequency colour noise across a whole image or in selected areas
- Easing colour and brightness noise when developing images at high ISO values
- Improved maintenance level of outlines during noise reduction
- Adjusting bright and dark sections with the dodge and burn function and HDR effects on single images
- Improved red eye correction in images and portraits
- Special portrait mode for targeted improvements to skin tone, both in detail and across an entire image
- Automatic level correction for adjusting perspective
- Unsharp mask during preview in live image for more precise control
- Changing shading centre
- Digital softproof on monitor with print warnings displayed
- Hot folder – batch processing folder for automatic recognition of image series
- Clearer controls with 3-column correspondence to controls
- Improved marks and image preview tools
- AVX2 support for microprocessors to improve calculations
- Individual displays of JPEG / TIFF with the same name or title and full screen preview.

Availability, price and upgrades
