## **Texim Europe and Inventek Systems Sign European Distribution Agreement**

**Billerica, Massachusetts, October 24, 2012:** Texim-Europe ( [www.Texim-Europe.com](http://www.Texim-Europe.com)) and Inventek Systems ([www.inventeksys.com](http://www.inventeksys.com)) today announced a European distribution agreement for Inventek's complete portfolio of Wi-Fi and GPS modules.

Texim-Europe will distribute Inventek System's portfolio of high-performance, low-power, Broadcom-based Wi-Fi modules offering an FCC/CE certified Wi-Fi solution with simple embedded serial-to-WiFi connectivity. With an on-board microcomputer running the networking protocols including the TCP/IP stack, seamless connectivity is accomplished using simple AT Commands. Inventek's Wi-Fi modules are an ideal solution for manufacturers who are looking to add wireless connectivity to their products but do not have extensive Wi-Fi and RF experience. The adoption rate of Wi-Fi embedded connectivity is surging and includes applications such as home appliances, healthcare equipment, industrial control and cloud based services.

Texim-Europe will also distribute Inventek System's line of compact global positioning system (GPS) modules based on CSR/SiRF Star IV GPS technology. These modules offer industry-leading size, sensitivity, low-power and fast location-fix performance. The module family is optimized for size and battery constrained applications and are offered with and without an integrated ceramic patch antenna.

"Texim-Europe's world-class sales and engineering expertise give us an important sales channel for servicing the European marketplace at a critical stage of our growth. Their focus on embedded systems and wireless communication is a perfect match for our product lines. With the rapidly expanding demand for embedded Wi-Fi and GPS solutions, we look forward to jointly supporting and expanding our penetration into the European market with the Texim-Europe team." said Martin Tierney, Chief Executive Officer for Inventek Systems.

"Texim-Europe is focused on providing connectivity services and solutions for the rapidly growing M2M/IoT systems market. Inventek Systems provides our customer base with a fast and easy way to embed WiFi connectivity and GPS capability into their products using leading edge technology from Broadcom and CSR/SiRF.", said Helmoed Gasthuis, Sales and Marketing Manager for Texim-Europe.

## About Texim-Europe

Having started its first activities back in 1962, Texim Europe has gained massive experience in Electronic Components and Sub-systems Distribution and is now present in the Benelux, Germany, Austria, UK and in the Nordic area. Texim Europe has rapidly become the reliable Technology and Supply Chain Solution Provider of choice for customers developing & producing Electronic Applications.

The head office and State-of-the-Art Logistics Centre is located in Haaksbergen, the Netherlands from which customers in every part of the World are served. Texim Europe is part of TKH Group NV, a 1 Billion euro Dutch public company, with a strong position in the Telecom, Building and Industrial Solutions market segments.

## About Inventek Systems, Inc.

Inventek Systems is a USA-based, full-service wireless solutions provider focused on 802.11 WiFi embedded solutions, GPS embedded modules and antennas. A wide spectrum of standard and custom embedded products is offered ranging from low cost system-in-a-package (SIP) products to modular based custom solutions. Inventek provides a unique set of services from consulting to custom design to cost effective high volume manufacturing.

Inventek Systems products are used in a wide range of consumer, industrial, and defense based applications. Inventek's eS-WiFi and GPS products are enabling customers around the world to add WiFi connectivity and GPS features at a quickening pace with minimal design effort.
