

## 57M SWITCH SERIES WITH WIRE LEADS AND REAR SEALED

### Rear sealed 16mm Switch with wire leads

ITW's 57M Series of vandal resistant, rugged switches are now available with wire leads. These switches are made of zinc alloy with a velour chrome finish. They are IP67 rated and have a temperature range of -40°C to +85°C.

With the new wire leads the switches can be used in even more applications. If the switch is ordered with this option, than they are automatically rear sealed and therefor have an all round protection.

With a diameter of only 16mm and the choice of solid state or mechanical switching function, these switches can be used in a multitude of applications. Standard options are: 6 LED colours (Green, Red, Blue, White and Yellow), mechanical or solid state switching and solder, PC terminals or now flying leads. Customer specific versions are available on request.

Typical applications are security equipment, industrial controls, medical equipment, food processing, transportation and computers.
