Layer2 Knowledge Management Suite for SharePoint

Compatible with:

SharePoint

SharePoint 2013
SharePoint 2010

Features & Benefits

The Knowledge Management Suite for SharePoint makes it as easy as possible to manage taxonomies, to classify content and to use content classification for knowledge browsing, navigation, content discovery and search:

- 100% based on the Microsoft SharePoint 2010/2013 Server Enterprise Metadata Management API.

- **Taxonomy Manager:** Advanced features to manage the SharePoint Term Store including import, export, update and deployment. Support for several formats including SKOS. Additional managed metadata properties (e.g. classification rules).

- **Tag Suggester:** While manually tagging items or documents with enterprise metadata a tag suggestion list based on given Term Sets (taxonomies), classification rules, item properties, context and document content is displayed.

- **Auto Tagger:** Classifies items and documents automatically in background without any user interaction, based on given Term Sets (taxonomies), classification rules, item properties, context and document content. High quality of subject classification using a high performance Microsoft .NET Framework based rule engine. Installed IFilters are used automatically.

- **Tag Navigation Web Part:** Harvest the value of content classification by using the SharePoint managed metadata taxonomy tree directly for content discovery and navigation. Flexible link building, e.g. link to the Hashtag Profile Page or directly to the Term ID search result list. It optionally displays additional information, e.g. term description. Template-based design.

"We were able to successfully use the tag rules, tag suggestions and the auto-tagging features in your KMS product. Great product and thanks for offering it at a reasonable price point."

Andy Stout, CMC Group

Additional Features

- **Tag Directory Web Part:** Renders the SharePoint managed metadata taxonomy tree as flat A-Z term directory index for content discovery and navigation, e.g. as glossary.

- **Tag Cloud Web Part:** Navigate the content by its importance using a familiar taxonomy-based tag cloud.

- **Related Content Web Part:** Automatically displays related content in a given context using managed metadata based tagging.

Licensing & Partner Program

- **Free Shareware Edition** available on web site: Just register, download and use.

- **Server license:** US$ 1,899 / 1.499 € per server

- **Optional:** Annual Software Assurance: 20% per year.

- **Additionally available:** Full managed metadata support for almost any external data source.

- **Partner Program:** Cost-free, 30% discount, FREE NFR versions, priority support, lead transfer, joint development.
