

Touch Panels – a square deal

Already last year, the VIPA Company for visualization and process automation mbH in Herzogenaurach, introduced own touch panels.

The portfolio of the touch panel family is now rounded off by one further family member. Starting with this year's 4rd quarter, the panels can also be sampled as 12.1"-XVGA-TFT color display.

As usual, the VIPA touch panel family is suited for all operating ranges of factory, process and building automation.

Due to the aluminum die casting case and front side IP65 protection type, the panels are also suitable for deployment in rough industrial environment.

The portfolio of the panels from 5.7" QVGA monochrome to 12.1" VGA-TFT color display is already available.

The operating panels are available with the operating system Windows CE5.0 including zenOn 6.21 or MoviconX real flexible.
