Layer2 Solutions for Codeless Data Integration and Synchronization

Features & Benefits

The Layer2 Cloud Connector can integrate and sync your Microsoft Dynamics AX data with various other corporate data sources, applications and systems – on-premises or in the cloud - codeless and in just minutes:

- Connects AX data to 100+ other data sources (on-prem or cloud-based) via the Layer2 Data Provider for Odata.

- No touch data integration: Does not require any customization or installation on both sides of sync.

- No programming or tools required: Setup in a few minutes guided by a wizard. Sample connection templates included.

- Flexible AX data query: OData query syntax.

- Reliable architecture: A connection is established just for data synchronization – not for general data usage in the connected systems. All external system features are fully available for your synchronized AX data.

- Secure data connection and transfer: The connector runs on a server or client inside your corporate network with Internet connectivity available. No data is exposed to any 3rd party.

- High performance: Works great with large data sets.

- 100+ data sources supported: ODBC, OLEDB, OData, .NET-based providers, Excel, XML, Text/CSV, MS Office Access, SQL Server, Oracle, MySQL, IBM DB2, IBM AS/400, IBM Informix, PostgreSQL, Microsoft SharePoint and Office 365, Dynamics CRM/ERP, Microsoft Project, Active Directory, Exchange, Lotus Notes, SAP, XML/SOAP Web Services etc.

- Many 3rd party data providers supported: Amazon, Azure, Google, Twitter, Facebook, Salesforce etc.

- Sync AX data with Microsoft SharePoint and Office 365: Office collaboration with search, change notifications, workflows, mobile and offline access.

- Cost-effective solution: One-time fee. End-users don't need AX licenses for flexible data access.

> *"Simple and easy to set up and install. Once you have your connection strings set up, it just does its thing without any attention or effort needed. Support is quick to respond and knowledgeable. Program seems 100% reliable so far."*
