### **Gibson-housing from BS Kinetics**

Now available for the new Sony Alpha cameras 200, 300 and 350.

These new digital SLR cause a stir in many respects!

They are a downright innovation with life-view-operation.

In Sony A300 and A350 the quick AF live-view-technologie is integrated for the first time. It makes possible to take two pictures per second in the live-view-mode and it permits concise takes from fast moving motifs.

The caught picture-motif is live assigned on the LCD-monitor. The lag is almost null.

Furthermore the A350 offers a hinged display which provides a unique ease of use.

All three models are absolute top products for semiprofessional photographers and amateurs in the segment under 1.000,-€

The camera provides photo-take-ups from 10,2 – 14,2 million pixel. Macro- tele- and wide angle-lens are usable accessorially.

A duplex anti-dust-system protects the sensor when the lens will be changed.

The Gibson-housing for these cameras has – proceed as normal – all possibilities to handle, it possesses two secure-stainless-steel-clamps and a hightened inner housingborder for more security.

There is the possibility to plug in flash systems in the housing or to flash manual with underwater flashes. Other accessoires are certainly suitable for connection.

Because of using the carbon fibre the housing is very lightweight, therefore it's ideal to transport in the air-plane. It rests on the water neutrally and guarantees so optimal diving fun with haunting underwater pictures.

### *Technische Daten*

- Material: Carbon fibre
- Tiefe: 80 meters
- Portsystem: Bajonett- changeport
- Viewfinder: Viewfinder camera (live-view), monitor
- Functions: all
- Housing lock: Plug clamps
- Size: 180 x 190 x 130
- Weight: 1,9 kg
- Scopy of supply: Grip arm, leakage warning, flatport

Price: ab 1.760,00 €
