The Negev-housing of BS Kinetics

BS Kinetics GmbH offers a universal housing for different camcorders (e.g. Sony TRV 890, 900, 950, PD 100, etc.)

Of course all common camera functions can be operated and additional ones can be installed customized.

The big 3,5" monitor offers optimal view on the display.

The Negev-universal-housing is, like all housings by BS Kinetics, fabricated from carbon fibre and there for especially light-weight which makes it so easy transportable in airplanes.

It has a little upwelling in the water, which is equalized by using a lighting system, e.g.. If it is used without lights, a leadbox can be attached, which is of course charged with lead right before the dive.

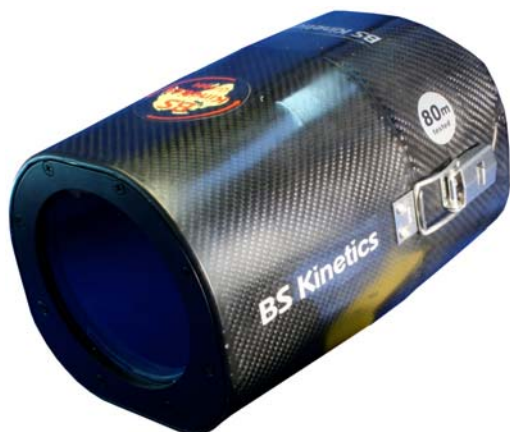

The housing is available immediately with standard- or change port and makes your unique dive an unforgettable experience and present again any-time!

Technische Daten

Material: Carbon fibre
Depth: 80 meters
Portsystem: standard- or changeport
View-finder: LCD-mointor 3,5“
Funktionen: 12
Lock of housing: Plug clamp
Measurement: 120 x 130 x 200
Weight: 3,5 kg
Scope of supply: Grip, leakage warning, port

Price: from 1.760,00 €
