An expanded range of release tools

New release tool simplifies day-to-day work

An additional, handy release tool is now available from the Elparts product range. Nowadays, many vehicles feature plugs from manufacturer FEP (Fahrzeugelektrik Pirna), such as those used to connect air mass sensors, ignition coils, headlights, level sensors and much more. These can particularly be found in models produced by the VW Group. Herth+Buss can offer a tool for these which is as simple as it is practical. In practice, these plugs often can't be pulled out as easily as you might think. This is particularly true if the plugs are already somewhat dusty or the variant in question is on the larger side. These plugs can be released safely, quickly and without damage using the housing release tool recently added to the Elparts product range. These benefits make the release tool a logical addition to plug housing assortment 54290200. In addition, the tool features a useful hole for hanging up, which means that it's always close at hand and in its rightful place in the workshop.
