

FOR IMMEDIATE PUBLICATION

Canvys – The Touch Screen Specialist - Touch-sensitive Solutions for all Applications

Canvys – Consultation, design, development and implementation of comprehensive visual technology solutions for health care, Original Equipment Manufacturers (OEMs) and digital signage applications

Donaueschingen – 03.11.2009. Canvys – Visual Technology Solutions offers a variety of different touch display solutions for use in medicine and in the public venues and by the military technology.

Both in private daily life and the work environment, touch functionality is finding its place as an interface between people and technology. The variety of applications ranges greatly and costs for touch-sensitive display solutions continue to shrink.

Today, Canvys offers all of its LCDs with the option of at least one or more touch technologies. To this end, Canvys is not limited to the integration of resistive or capacitive sensors, and is capable of implementing surface acoustic wave (SAW) or projective capacitive sensors. For large format displays, there are also dispersive signal technology (DST) and optic sensors. To customize the best solution for each customer, Canvys offers comprehensive touch technology consulting.

The number of displays for very diverse applications is as large as the extensive variety of technologies used by Canvys. The sizes currently offered range from 8.4-inches to 52-inches. Canvys adapts displays to each customer's criteria and needs.
