Press Release

Safety Network International e.V. – Forum for Safety and Automation

Ostfildern, 19th April 2010

During the Hanover Trade Exhibition 2010 Safety Network International e.v. presented their official report for the previous business year. Despite the fall in global economic development, in 2009 the organisation was able to develop in a positive direction. It was possible to maintain the same number of member companies from the previous year.

Amongst the many realised projects, one in particular should be mentioned, and that is the successful adaptation of SafetyNET p specifications into the standardised range 61784-3 of industrial Ethernet profiles.

The further development and distribution of basic world wide safety standards is still of great importance in several countries including in many Asian countries. In Japan, resident organisation Safety Network Japan will celebrate the tenth anniversary of their foundation in June 2010 within the scope of a national roadshow. In China, a foundation meeting is planned for Safety Network China in October 2010. In Europe, the main objective is still the distribution of the communication system with SafetyNET p in various applications. Safety Network International will act as a backup in the implementation and certification of new active and passive components and machines.

Safety Network International e. V.:

Safety Network International e. V. is an independent organisation originating from the SafetyBUS p Club International. Apart from the well established SafetyBUS p[®] system, the organization also supports the Ethernet based system SafetyNET p[®]. With this, the network sets the next milestone in industrial communication systems. Members are users, integrators and developers of both systems. The network promotes their implementation and technical development. The organization was founded in 1999 and now has 75 member companies.
