Layer2 Cloud Connector for SharePoint & Office 365

LAYER2 CLOUD CONNECTOR

Office 365

100+
apps and systems

> *I am thoroughly impressed with your Cloud Connector software. It is an excellent concept, has extremely comprehensive functionality, and is easy to configure.*
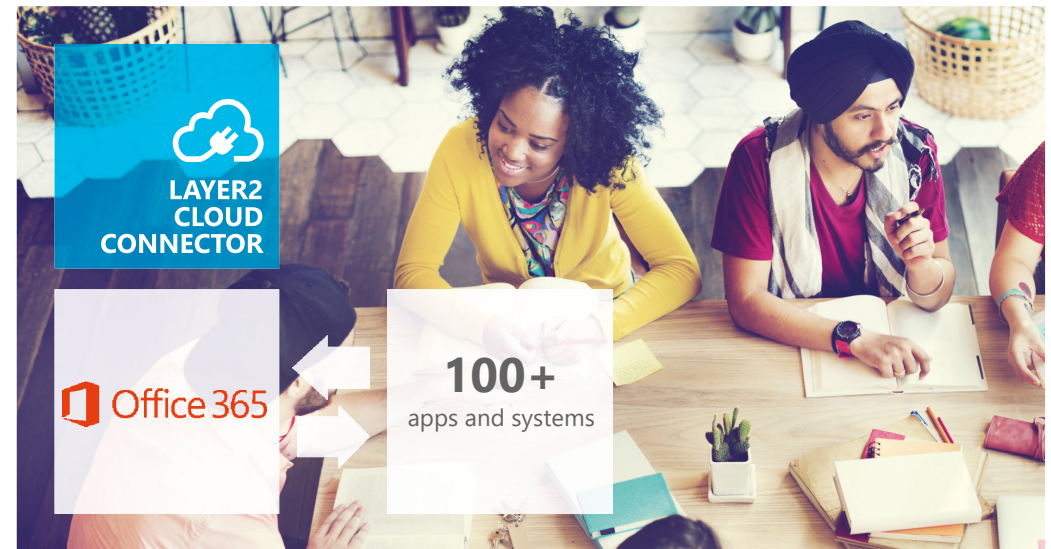

Brent Seeney, INEX Independent Extrusions Limited

FEATURES & BENEFITS

The Layer2 Cloud Connector connects your line-of-business data to Microsoft SharePoint, Office 365, and almost any other system:

- No programming or tools required: Just select a data provider and enter the connection string and data query. No installation or customizing at SharePoint or the external data source required.

- 100% compatible to ALL SharePoint 2010/2013/2016 offerings: on-premise, externally hosted, Office 365, OneDrive for Business, or sandboxed.

- Reliable architecture: A connection is established only for data exchange – not for user interaction. External data is cached in native SharePoint lists.

- Secure data connection and transfer: The connector runs where your data resides today - on any server or client inside your corporate network with

Internet connectivity, or in the cloud. No data is exposed to any 3rd party.

- Dynamic columns: Optionally add calculations, transformations, translations, and business logic to your connections using C#.

- Almost any data source supported: ODBC, OLEDB, OData, .NET-based sources, files (Excel, XML, CSV), File System Replication, SQL Server, Oracle, MySQL, IBM Db2, IBM AS/400, IBM Informix, PostgreSQL, SharePoint, Dynamics NAV/CRM, Exchange, Active Directory, Navision, Lotus Notes, SAP, Web Services, etc.

Layer2
leading solutions.

- Data providers for SharePoint, OData, files systems, XML/RSS, Exchange, SOAP included. Vendor-specific or 3rd-party ADO.NET data providers supported.

- Start workflows or send email notifications in the cloud on external data change.

- Sync your local or server file shares to SharePoint, Office 365, and OneDrive for Business without any restrictions.

- Connect all supported systems directly to each other, without using SharePoint or Office 365.
