**Release date** : immediate

### Space-saving Vandalproof Pushbutton

The new high quality machined pushbutton switches from Engelking, requiring only 9.8mm space behind the front panel, are turned from solid brass.

Afterwards the low profile switches are hand polished and chromed giving them a brilliant finish and making them suitable for high-end designer applications.

The switches can be engraved to customer specification and meet the requirements situations where IP68 waterproofing is required.

Engineered to close tolerances, the pushbuttons are also suitable for situations where vandal protection is necessary.

Other finishes are also available including stainless steel and titanium, upon request. Also alternative turned forms can be manufactured to order.

Switching current is 100mA 42V and the switch button is available in rotating and non-rotating variations. The diameter is 21.5mm and connection is via flying leads.

Made completely in Germany, these pushbuttons have a mechanical life cycle of over 2.5 million and the switch is completely encapsulated allowing operating temperatures of -40 to + 80C.
