Press Release

VCmaster

NOTHING BEATS A GREAT TEMPLATE

August 2016

The intelligent Engineering Software VCmaster reduces Redundancies and increases Productivity
VCmaster supports engineers to create efficient digital work flows

Today's building industry is torn between the requirement of implementing modern technology and dealing with the ubiquitous intense cost pressure. With each project being unique, chances of taking reusable information from one project to another are few and unfortunately not always realized. Current trends, like working in task forces or employing freelancers, require a safe and easy way of digitally sharing knowledge. Yet it is still exchanged either orally or in writing - or not at all. Thus creating "islands of information". Valuable information is lost forever for other members of the team and future projects.

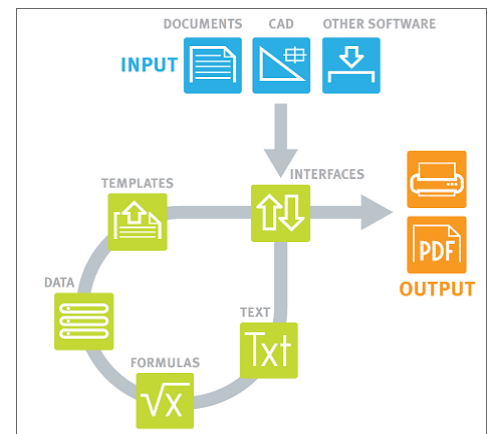

Image visualizing VCmaster's interoperability and collaboration functionality.

Engineering knowledge increases the company's value.

Compiling digital technical documentation makes this valuable knowledge available to others, regardless of their location. VCmaster enables collaboration among numerous members of an engineering project team. Supporting the sharing of entire projects, sub documents or calculations, and making information readily available for everyone involved.

Getting the right infrastructure can go a long way

A well thought out digital strategy gives the engineering office a compelling competitive edge. The right software can avoid losing data, calculation errors and other delays that go along with traditional file sharing on team projects.

Besides being readily available VCmaster's digital documents offer the convenience of being searchable, editable and reusable. Engineers can compile structural analyses using parts of already filed documentation, reproduce project related information on VCmaster Wikis or compile documents using external software and due to VCmaster's unrivaled interoperability, import those outputs into VCmaster. Ensuring the trouble-free joint and sustainable use of documents and calculations.
