### SFC Energy: Sargo boats now available with integrated EFOY COMFORT fuel cell for ultimate power autonomy

- Finnish boat builder Sarin Boats offers the EFOY COMFORT fuel cell as optional on-board power supply for all boats of their Sargo – The All Season Boat brand.
- On board the fuel cell provides fully automatic, silent, environmentally friendly off-grid power.

Brunnthal/Munich, Germany, August 29, 2019 – SFC Energy AG ([F3C](#), ISIN: [DE0007568578](#)), a leading provider of hybrid power solutions to the stationary and mobile power generation markets, announces the addition of another renowned boat building brand to their circle of marine customers: Finnish boat builder Sarin Boats, Kokkola, Finland, now offers the EFOY COMFORT fuel cell as optional equipment on board of all boats of the brand Sargo – The All Season Boats.

SFC Energy's EFOY COMFORT fuel cell is a strong asset on board of leisure and professional racing boats. The lightweight, compact fuel cell features decisive advantages over conventional off-grid power sources like generators: it is silent, environmentally friendly, weather-independent and fully automatic: the boat owner only has to change the fuel cartridge occasionally, which only takes a few seconds.

“Our commitment to our customers is ultimate safety and functionality on board – at all times,” says Thomas Sarin, CEO of Sarin Boats. “With the EFOY COMFORT fuel cell, skippers may always have full on-board batteries without ever having to start the engine. And the fuel cell is also an important back-up safety feature: it ensures reliable power redundancy for navigation, communication and other important devices independently from the Diesel engine. We make sure that our customers leave harbor on board of a very safe vessel.”

“We are proud to welcome Sarin Boats to the international group of boat builders who use the EFOY COMFORT fuel cell as an environmentally friendly, reliable power source for more on-board security”, says Dr. Peter Podesser, CEO of SFC Energy. “Our fuel cell has now become a strong asset on board of more and more professional racing boats, leisure yachts, and sailboats. It is small, lightweight, and features excellent power density: boat owners can take along much power at minimum space and weight.”
