**16 - 21 January 2017 Messe München exhibition centre,
Hall B1, Stand 538-539**

Leonberg, 16/01/2017

**Living Solutions
New solutions for sliding doors**

The GEZE drive kit: move heavy sliding doors easily

Large glass elements in terrace and balcony areas provide transparency and light-drenched living spaces. GEZE offers the right drive kit for the automation of particularly large, heavy sliding doors.

Terrace or balcony doors can thus be closed in a secure and energy-efficient way. In addition to the sliding door drive unit, e.g. comprising the Slimdrive, Powerdrive or ECdrive series, the pack includes – depending on the profile system – object-specific components such as mounting materials, covers and return pulleys. Door manufacturers and installation companies thus receive a complete automation package from a single source, and can very easily design convenient, barrier-free entrances. The GEZE drive kit is suitable for leaf weights of up to 700 kg and for different door profiles. On request, it can be integrated into a Smart Home system, and controlled centrally.
