Intelligent Engineering Software VCmaster increases Productivity by reducing Redundancies

VCmaster has been proven to considerably contribute to more professional structural design calculations

With its leading-edge software VCmaster, Veit Christoph GmbH, a software developer specializing in computer programs for engineers, offers a one-of-a-kind software-application that is capable of compiling uniform and continuous documents from numerous different software-sources and data.

Connectivity is the key for efficient technical documentation

Features such as the innovative t2W-interface characterize the software's cross-product concept which allows the implementation of all software categories, by merging different data types into one single document - with the benefit of a uniform layout. Closing a crucial gap in technical digital documentation.

"VCmaster brings together all collected information in one single place, allowing for efficient organization of all planning processes. Accuracy, currency and availability of all this data is an essential part of commercial success." states Veit Christoph, founder and Managing Director of Veit Christoph GmbH.

Due to VCmaster's inventive approach comments or calculations can conveniently be added to the new document. Resulting in a consistent document, complete with page numbering, uniform headers and footers, table of contents, PDF export and much more.

Getting the right software infrastructure can go a long way

Besides being readily available VCmaster's digital documents offer the convenience of being searchable, editable and reusable. Engineers can compile design calculations using parts of already filed documentation, reproduce project related information on VCmaster Wikis or compile documents using external software and due to VCmaster's unrivaled interoperability, import those outputs into VCmaster. Ensuring the trouble-free joint and sustainable use of digital documents and calculations.

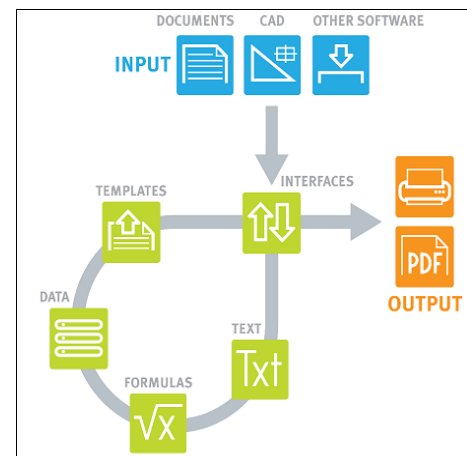

The option of creating own calculations and combine them with existing templates is unique to VCmaster. Structural design calculations created with VCmaster can be edited freely to meet the need of each individual project.

"With VCmaster engineers and technicians have software at their disposal that creates cutting-edge technical documentation with limitless options." says Veit Christoph.

VCmaster brings together all collected information in one single place.

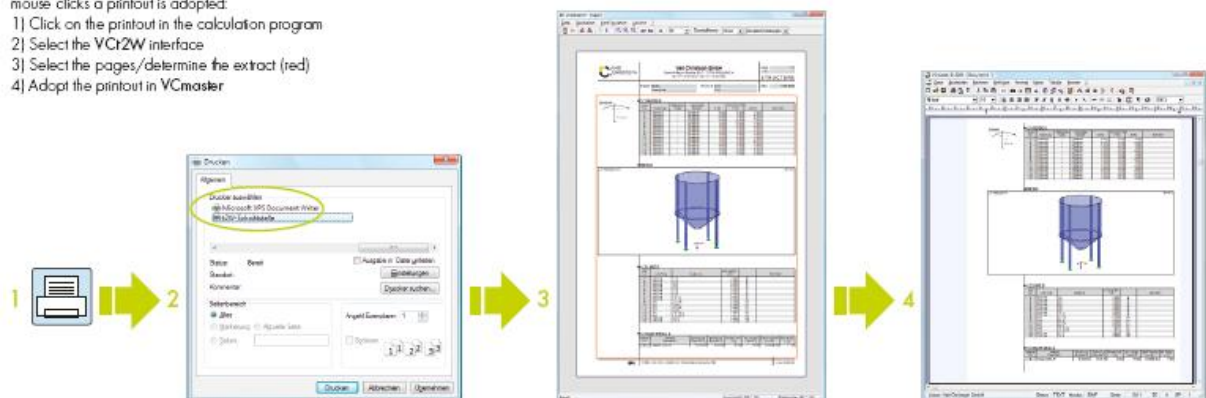

Press Release

VCmasters is superbly suited for the recording of data, reuse of calculations and collaboration between engineers.

The mode of operation of VCcr2w is simple. With a few mouse clicks a printout is adopted:

- 1) Click on the printout in the calculation program
- 2) Select the VCcr2w interface
- 3) Select the pages/determine the extract (red)
- 4) Adopt the printout in VCmaster

Compilation of multifaceted data and output in uniform layout.
