

European Inventor Award 2011

- Trophy made of ARBOFORM

Ilsfeld-Auenstein/Budapest May 16, 2011. Since 2006, the European Patent Office (EPO) and the European Commission are awarding annually the European Inventor Award.

This award, which ranks among the world's most important awards of patent-based inventions is featured in five categories: Industry, SMEs (small and medium sized enterprises), Research, Lifetime Achievement and Non-European Countries.

This year the "European Inventor Award 2011" trophy is fashioned from ARBOFORM, the renewable "liquid wood" material invented by the company TECNARO, located in Germany.

This prestigious project has been realized on behalf of the European Patent Office within a few weeks.

TECNARO was supported by Mr. Helmut Lutz (of company CastSolut & KLM GmbH), located in Ellwangen, Germany and Mr. Ulrich Abdinghoff (of company Hesse Lignal GmbH), located in Hamm, Germany.

The winners of the last year, Mr. Helmut Nägele und Mr. Jürgen Pfitzer are visibly relieved by the systematic implementation and are slightly proud of the great quality of the beautiful trophies made of ARBOFORM.

The two TECNARO Managers are travelling now as guests of the European Patent Office and the European Commission to Budapest and are looking forward to the highly expected award ceremony on May 19, 2011.

Please visit also the websites of the European Patent Office with additional information and video interviews, including the trophies made of ARBOFORM.
