

## Press Release

### Comprehensive protection for industrial PCs

### New generation of mGuard PCI/PCIe cards with front-side SD configuration memory

**Berlin, July 2012** – With the mGuard pci<sup>2</sup> SD, a new generation of compact Innominate mGuard security appliances for driverless operation in PCI slots is now available. It provides integrable firewall protection and secure VPN remote maintenance connections for all types of industrial, panel and embedded PCs, as used e.g. in robot controllers or HMI applications for operation and monitoring. This allows business-critical computers, machines or even entire system networks to be securely and reliably protected from attacks.

In addition to the PCI card, an mGuard pcie<sup>2</sup> SD version is now also available for slots of the newer PCI Express standard, allowing universal use of the cards in any device with a PCI or PCI Express slot.

The new mGuard cards have front-side configuration memory in the form of an exchangeable SD card, as is already implemented in current mGuard DIN rail devices. This enables the mGuard pci[e]<sup>2</sup> SD cards to be quickly and easily put into operation, updated or replaced.

Further information as well as the data sheet can be found at [www.innominate.com](http://www.innominate.com). A photo of the mGuard pci<sup>2</sup> SD is available for download [here](#).

### About Innominate Security Technologies AG

Innominate, a Phoenix Contact Company, is a leading supplier of components and solutions for controlled and secured communication in industrial networks. The German company specializes in the protection of networked industrial systems and the secure remote diagnosis and maintenance of machinery and equipment over the Internet. Its mGuard product line of network security appliances provides router, firewall, virtual private network (VPN), as well as quality of service (QoS) functionalities and helps with intrusion detection and antivirus protection. The mGuard portfolio is complemented by a highly scalable device management software. Innominate products are marketed worldwide under the mGuard brand through system integrators and OEM partners. Further information can be found at [www.innominate.com](http://www.innominate.com).
