

PRESS RELEASE

DESIGNA at the EPA Congress and the Parking trade fair 2015 in Berlin

Kiel, 2015-09-21: DESIGNA Verkehrsleittechnik GmbH is presenting its innovative product solutions and services under the motto "WeAreConnected. AreYou?" from 23rd to 25th September at the EPA Congress and the Parking Trade Fair in Berlin.

All of our visitors are in for a surprise: From a new technology with which short-term parkers can now also be provided with a facility for entering and leaving the car park contactlessly using a Smartphone, without making a reservation beforehand. Car park operators can therefore appeal to their previously unknown customers with targeted individual or automatic promotions, and therefore increase the utilisation of the parking areas.

But that's not all! Another elementary new module has been added to the successful ParkingHQ Suite with which different parking systems can now be operated via a single control centre.

You can also look forward to some fascinating new features for Web & App solutions. In other words, there are many good reasons for visiting the DESIGNA exhibition stand A 02 for more information. Our managing directors will be on site in Berlin with their teams, and would be pleased to answer any questions.
