Schlemmer at the IZB: Focus on automotive megatrends

Munich, 21 August 2018 – The Schlemmer Group will be participating with bespoke solutions and an extensive customer-specific product portfolio in the field of cable and air & fluid management at the International Suppliers Fair (IZB) in Wolfsburg from 16 to 18 October 2018. In **Hall 6 / Stand 6202**, Schlemmer will be presenting solutions of the future that help shape the transformation of the automotive industry. The focus will be on the development and requirements of the mobility of tomorrow.

The company is already successfully shaping the megatrends of e-mobility, sustainability, connectivity and safety with its strategic concept "Whatever the future holds, we are prepared". In addition to classic cable management, Schlemmer is transforming lighting and visual components in a new era of camera and sensor cleaning. With safety-relevant components for braking systems and wiring harnesses of autonomous vehicles, the Schlemmer Group guarantees the pulse beat in the vehicle of tomorrow. The international company also has an unequivocal answer to intensified constraints concerning CO₂ reduction: Resource-saving production processes, the use of regranulates and MuCell® lightweight technology are no longer a vision of the future at Schlemmer.

The trade show stand was also developed in the spirit of the motto "Whatever the future holds, we are prepared". Visitors can expect a modern, futuristic stand concept with a thematically related and vivid interpretation as a live act.

About Schlemmer

Headquartered in Munich, Germany, the Schlemmer Group is a globally operating technology specialist that provides solutions for the mobility of tomorrow, thus helping to shape the megatrends of connectivity, safety, sustainability and e-mobility. Building on 60 years of experience, the company is an innovative value-added supplier that produces a multitude of comprehensive cable management solutions. In addition to its established Automotive
