Press Release

Superior Temperature Technology for a Better Life

In addition to its diverse product line, JULABO will exhibit selected products from the CORIO, DYNEO, and PRESTO series at this year's Analytica.

Seelbach, 3/16/2018 Visitors to JULABO's redesigned booth (Analytica Hall B2, Booth 304) from April 10 to 13 will be treated to exciting and varied highlights under the motto "Superior Temperature Technology for a Better Life".

JULABO is one of the leading providers of professional temperature control technology and will present an overview of solutions for routine and specialized tasks at both the lab and industrial scale. Visitors will have the unique opportunity to get a close and personal look at JULABO's varied line of heating and cooling circulators, highly dynamic process circulators, recirculating coolers, and water baths.

In addition to the regular product line, JULABO will also exhibit selected solutions, like the ultra-flexible CORIO units. They are the ideal way to get started in the world of professional temperature control and are capable of handling a wide range of routine applications.

JULABO's new DYNEO series of cooling and heating circulators are available in several different power classes and cover a temperature range of -50 to +200 °C. Their intelligent control system makes the entry of parameters through a centralized controller easy and intuitive.

By enabling rapid temperature changes with a high degree of precision, units of the PRESTO series are the heavy lifters of highly dynamic temperature control systems. They cover a temperature range of -92 to +250 °C with extremely high cooling and heating capacities.

Be sure to visit us at this year's Analytica (Hall B2, booth 304). You can also join us for the first JULABO Walk and become part of the JULABO community. For more information visit <https://walk.julabo.com>.
