Press release

Xeditor integrates intuitive Formulaeditor

Munich, December 2, 2014. As from today Xeditor has a new module in its program: the WIRIS Formulaeditor. The web-based WYSIWYG-Editor is a powerful, user-friendly editor, with which without prior technical knowledge, mathematical formulas and complex expressions can be created.

The WIRIS Formulaeditor is a visual processing tool, with which formulas are created in the standardized format MathML. It refers to a scheme (Mathematical Markup Language) that produces mathematical formulas and complex expressions. To display the generated equations in browser high quality pictures are inserted in the documents.

The Formulaeditor is particularly suitable for users who work with mathematical, statistical and scientific publications, as well as for educational institutions or in research and teaching.

Target group

Companies with multi-channel publishing, technical documentation, contracts and editorial publications.

Support

Xeditor provides free support and service for up to ten hours within the framework of a test installation.

Pricing

Xeditor Framework (incl. 1 domain and 1 user license for named user): EUR 2,500 (excl. VAT), additional user license: EUR 250 (excl. VAT), module "WIRIS-Formulaeditor: EUR 1,000 (excl. VAT).

Trade fairs

XML Prague (February 13-15, 2015), Frankfurt Book Fair (October 14-18, 2015), tcworld conference (November 10-12, 2015)
