IEC Connectors with Integrate Fuseholder with Voltage Selector

The CLIFF® MS-3 series power input connectors offer a highly cost effective method of making equipment power input connections to meet IEC standards.

These high quality input connectors are produced from heat resistant plastic with solid brass nickel-plated metal parts. Parts for soldering are tin plated.

What is interesting is the composite design incorporating an input, fuseholder and voltage selector in a small space. The fuse carrier is available printed with various voltage combinations and doubles as a voltage selector. Two terminal options are available – solder tag and quick connect. All products are produced in accordance to IEC320 / EN60-320 and have various safety approvals.

The standard colour is Black, however some products are available in other colours, subject to a reasonable order quantity. The MS-3 DPS version is available where the 'L Pin' is not connected to the fuseholder permitting double pole switching.
