Rapid.Tech 2016 launches call for papers

(Erfurt, 7 September 2015) Documents are now online for the call for papers for Rapid.Tech 2016 in Erfurt. Scientists and practitioners from all over Europe are invited to contribute to the programme of the three-day conference and trade fair with talks and examples of innovative applications. Contributions are sought that clearly demonstrate the future potential of AM technologies and 3D printing.

With a comprehensive programme that has now been extended by an extra day, Rapid.Tech is continuing to strengthen its position as the hotspot for researchers and users in the field of additive manufacturing. With its unique mix of think tank and application-focused exhibition, it offers plenty of opportunity for discussion and dialogue between newcomers to the field, experts, researchers and users – in both theory and practice. 150 exhibitors, over 4,000 trade visitors and more than 700 conference participants from Europe and around the globe are expected in Erfurt from 14 to 16 June 2016.

Messe Erfurt is showcasing the latest developments in additive manufacturing with its four new specialist forums: Additive contract manufacturing, Technological developments in AM, Automotive industry and Electronics.

As before, the Science, Tools, Aviation, Medical Technology, Dental Technology and Construction expert forums and the user conference provide excellent platforms for sector experts to exchange information and present new applications and products.

The criteria and deadlines for submitting presentations, registration forms and all further information can be found here:
