iWay Software Releases iWay 2007, a Best of Breed Integration Solution

New Enterprise-Class Integration Enhancements for Development, Deployment, and Management Increase Cost Savings and Productivity Gains

New York, NY – August 28, 2007 – iWay Software, an Information Builders company and an innovator of [enterprise integration](#) solutions, today announced the release of iWay 2007. Major enhancements in iWay 2007 are oriented toward increased enterprise scalability and interoperability. The release encompasses new enterprise-class features, including a new version of [iWay Service Manager](#) that runs within industry standard application servers, significant enhancement of the [iWay SOA Management Suite](#), and a new incarnation of the iWay Integration Workbench.

iWay Service Manager Adds Deployment With Application Servers

iWay Service Manager is an enterprise service bus (ESB) that enables organizations to create, compose, and manage services from the wide variety of systems and technologies available through iWay's industry standard adapters. In addition to running as a standalone server on many platforms, iWay Service Manager can now be deployed within any Java 2 Enterprise Edition (J2EE) compliant application servers, providing greater scalability, improved reliability, enhanced security, and a powerful and flexible distribution mechanism for integration solution scenarios.

iWay SOA Management Suite Delivers Governance Across Entire Enterprise

iWay SOA Management Suite provides end-to-end management of security, policy enforcement, service monitoring, and validation of services residing within an organization's [service-oriented architecture \(SOA\)](#) infrastructure. Most SOA management products are limited to working strictly with [Web services](#) when monitoring the components of an SOA, but iWay SOA Management Suite can now monitor all of the services created from the many applications, technologies, databases, platforms, and protocols that iWay supports.

iWay Integration Workbench Leverages Open Source Eclipse Framework

The iWay Integration Workbench is an integrated development environment for building, monitoring, and managing complex integration solutions. By leveraging the open source Eclipse framework, the iWay Integration Workbench will drastically improve productivity for developers by merging the various components of iWay's robust integration software toolkit into a single development environment.

“We are continually enhancing our products’ support for the development and deployment of enterprise integration solutions,” said J.T. Taylor, CTO of iWay Software. “Each of these improvements reinforces our commitment to quickly solve difficult integration problems and manage those solutions within increasingly complex IT environments. With iWay 2007, we are delivering a collection of features that will further empower our customers and partners when implementing enterprise-class solutions.”

About iWay Software

[iWay Software](#), an Information Builders company and the world's leading adapter vendor, accelerates business integration by providing tools that make service-oriented architectures easy to implement. Clients achieve short-term ROI by using iWay to reduce custom programming and to solve problems quickly, while incrementally creating an architecture that supports long-term projects. The biggest names in software, including BEA, Microsoft, and SAP, use iWay adapters to simplify access to ERP and CRM systems, messaging, legacy systems, e-business protocols like AS2 and ebXML, and more. Additional message transformation and data integration make iWay a natural integration choice – standalone or with other middleware.

About Information Builders

[Information Builders](#)’ award-winning combination of business intelligence and enterprise integration software has been providing innovative solutions to more than 12,000 customers for the past 30 years. WebFOCUS is the world’s most widely utilized business intelligence platform. It provides the security, scalability, and flexibility needed at every level of global extended enterprises. Its simplicity helps create executive, analytical, and operational applications that reach dozens to millions of users. Information Builders subsidiary iWay Software provides state-of-the-art, multi-purpose integration engines that address all SOA, application, data, and information management requirements. Its integration adapters have been adopted by the leading software platform providers. Together, these products give Information Builders’ customers the ability to live up to the company motto: Your business. No Barriers.

Information Builders’ customers include most of the Fortune 100 and U.S. federal government agencies. Headquartered in New York City with 90 offices worldwide, the company employs 1600 people and has more than 350 business partners.
