

AS Solar GmbH: Intersolar - AS Control with Own Consumption Display

Hannover, April 21, 2011:

In order to enable users of solar plants to optimise the electric own consumption **AS Solar** added another component to its online monitoring portal which will be presented for the first time at Intersolar Europe 2011 in Munich. This new feature continually analyses the relation between own consumption and produced PV-output so that the portal user instantly sees when it is profitable to start additional electric devices. The current situation is easily recognisable according to the traffic light colours red, yellow and green.

All systems with an own consumption metre monitored by the **PV-Station**, even older models, can use the new tool. Over the course of the year 2011 the own consumption display will also be available for the **PV-Interface**.
