

prime Visit: Quick, efficient visitor administration - even in an emergency

prime Visit, the visitor administration solution from primion Technology AG, facilitates the registration and administration of visitors within a company's building or premises. In this case, a visitor is defined as being someone who is not registered as an employee of the company or someone who is not there on a permanent basis.

The prime Visit software can be effectively deployed in cases where time-limited access to a defined area has to be monitored and when the activities during the time that a visitor is on site have to be traceable. In this way, opportunities for possible misconduct or damage can be limited and internal or statutory regulations can be adhered to.

prime Visit offers numerous benefits in comparison to manually maintained visitor records. Administration is very straightforward and the status of on-site visitors can be queried at all times. Historic data can be traced back and evaluated.

prime Visit can also be linked to the primion Access control system. Visitor registration can be completed within just a few minutes by using a card scanner or a QR code sent in advance by e-mail to the visitor, for example. The system is intuitive and user-friendly.

In addition prime Visit also enables:

- The generation of lists of on-site visitors
- The tracking of applied access authorisations within the defined area
- The search for specific persons and where they are currently located
- The link to different Access control systems within a company
- Rapid evacuation in an emergency through knowledge about how many people are on site
- Advance registration of visitors and visitor groups via the Internet or Outlook
- Generation of an automatic invitation process with reply option
- "Express check-in" using barcode
- Connection to hardware components such as QR code scanners, ID card scanners, Check-In Kiosks, etc.
