

## PRESS RELEASE

### **LambdaNet Communications Deutschland AG raises synergies within 3U Group: Change of leadership in the Operations department**

**Hannover, August 13, 2010.** On October 1, 2010 Philipp Gross will take over the position of COO of LambdaNet Communications Deutschland AG. Philipp Gross (47) started his career within the 3U Group 10 years ago as Head of Networks at 3U Telekommunikation AG. Since 2006 he has been Head of Engineering at 3U TELECOM GmbH and currently is Managing Director of 3U TELECOM GmbH and 3U MOBILE GmbH.

Effective October 2010 Philipp Gross will take over the position of COO of LambdaNet, a subsidiary of 3U HOLDING AG. With that 3U Group continues thoroughly to raise synergies – a process that was started in 2009 and which has been implemented successfully. The previous close and efficient collaboration in the areas of Network Technologies and Infrastructure within the Group as well as the bundling of know-how and experience now becomes apparent through this change in management. Fellow Board members Christoph Hellrung (CFO) and Uwe Knoke (CMO) are looking forward to a successful collaboration.

After the successfully achieved restructuring of LambdaNet, Sebastian Krems decided to leave the company effective September 30, 2010 at his own request to pursue new opportunities.

#### **About LambdaNet Communications Deutschland AG**

LambdaNet Communications Deutschland AG is a leading provider of telecommunications and Internet services. The company was founded in 1999 and is headquartered in Hanover. It is a wholly owned subsidiary of 3U HOLDING AG, which is listed on the stock exchange. Well-known clients from the corporate sectors for network operators, Internet service providers, industry, banking and insurance, services and retail rely on the company's services. LambdaNet operates one of the most advanced glass fiber optic and IP/MPLS networks in Europe with more than 40 cities connected in 11 countries as well as urban networks in five European economic centers. Together with its cooperation partners, LambdaNet provides VPN solutions around the world. The range of services from LambdaNet includes modern IP/MPLS data services, high availability Internet service, integrated voice services, broadband up to 10 Gb/s and outsourcing in its 25 computing centers.
