Press Release

EUserv offers Anniversary-Winter-Server with Intel "Kaby Lake" architecture and 50 IP addresses

Jena, 20.11.2017 - Already since 10 years the Internet Service Provider and datacenter operator EUserv Internet publishes its "Winter Servers" just in time for the start of the cold season. For the anniversary this year, the "Winter Server 2018" is equipped with fresh hardware based on the Intel "Kaby Lake" architecture, 50 IPv4 addresses and 2000GB FTP backup storage.

Today's performance for the price of past times

A look at the technical features of the "Winter Server 2018" reveals the versatility of this dedicated machine. With its Intel Pentium G4600 dual-core processor, 16 GB DDR4 RAM and two large 3TB hard drives, this allround-talent can be used for smaller virtualization projects, online shops or database hosting as well as for game-, mail- or web-server.

In addition to the Gbit connection and Traffic Flatrate, there are other reliable features such as 24x7 webreset, reinstallation, monitoring and traffic evaluation as well as vKVM and ReverseDNS. The range of installable operating systems includes numerous Linux distributions.

Like the first "Winter Server" in 2007, the current anniversary offer is also available for a monthly price of 45 EUR. The servers are delivered and hosted in the own datacenter of EUserv Internet in Jena/Thuringia.

The offer "Winter Server 2018" is strictly limited to 50 servers and valid until 20.3.2018 or while stocks last.
