Rheinmetall at I/ITSEC 2015: Innovative simulation and training solutions for an ever-changing security environment

Rheinmetall will be on hand at I/ITSEC 2015 in Orlando with a wide array of innovative solutions for simulation and training. The focus this year is on live simulation. Among other things, the Simulation & Training business unit of Rheinmetall Defence Electronics is presenting its versatile LEGATUS live training technology.

LEGATUS is a perfect example of Rheinmetall's approach to developing forward-looking live simulation technology: *tough*, independent and smart. *Tough* because it stands up to the most punishing operating environments. *Independent* because wireless and mobile training solutions are not dependent on fixed training ground infrastructure. *Smart* because they employ intelligent solutions for effective, highly realistic training with state-of-the-art technology.

Visitors to I/ITSEC can also learn more about the Group's other made-to-measure, high-performance solutions like the Command & Staff Training System OSIRIS, the cockpit procedure and maintenance trainer ASTERION (on display), the Cargo Hold Trainer Enhanced (CHT-E) for A400M military transport aircraft and the flight simulator for the Royal Thai Army's Bell 212 helicopters. Rheinmetall is also happy to address questions about the Group's many other activities in the field of simulation and training. We look forward to welcoming you to Stand 2601 at I/ITSEC 2015 in Orlando!
