

PRESS RELEASE

Software AG Positioned in the Leaders Quadrant for Business Process Management Suites

- Software AG named to the Leaders Quadrant for Business Process Management Suites¹
- Software AG's webMethods Business Process Management Suite (BPMS) enables organizations to automate, monitor, and optimize their business processes
- Businesses minimize their cost and risk and maximize their flexibility with webMethods BPMS by reusing and leveraging existing system investments to compose and coordinate new business processes

Darmstadt, Germany, 05 March 2009 - Software AG, a global leader in business infrastructure software, today announced that it has been positioned by Gartner, Inc., a leading industry analyst firm, in the Leaders Quadrant of the recently released Magic Quadrant for Application Infrastructure for Business Process Management Suites. Software AG's webMethods Business Process Management Suite (BPMS) is a full-feature, enterprise-scale platform that allows companies to design, execute, monitor, and manage complex business processes.

"We are pleased that Software AG has been positioned in the Leaders Quadrant," said Dr. Peter Kürpick, Chief Product Officer and Member of the Executive Board. "Software AG has made significant progress in business process management since launching [webMethods BPMS](#) only three years ago and we believe that our placement in the Leaders Quadrant illustrates the strides we have established in the market."

Software AG, together with its webMethods Suite, has a long history and proven track record of providing innovative solutions that enable corporations to continuously improve their operations. The webMethods suite of products enables users to reuse existing assets, lowering overall costs. Its ease of use makes it simple to access existing applications and data, and react to changes in real-time. The webMethods BPMS works seamlessly with webMethods' award-winning [enterprise service bus](#) and [SOA lifecycle governance](#) tool to provide enterprise-class, proven solutions.

webMethods BPMS is unique in the marketplace for its ability to coordinate people and technology into business processes that are quick, efficient, and easy to change, enabling businesses to achieve peak performance. In deployments worldwide, the webMethods BPMS platform is being leveraged by companies to become efficient and adaptive and thereby gain competitive advantage.

"Particularly in today's challenging global economy, it is essential that organizations find additional value in existing technology investments," Dr. Kürpick said. "webMethods BPMS has proven to help enterprises across the globe accomplish that goal. Already in 2009 Software AG is seeing companies acquire our products to support their strategies for operational efficiency and risk management."

¹ Gartner, Inc. "Magic Quadrant for Business Process Management Suites" by Janelle B. Hill et al, February 18, 2009.

The webMethods BPMS platform is designed to meet the needs of users throughout the enterprise, including business analysts, IT developers, process owners, line-of-business executives, and knowledge workers. Featuring an intuitive, easy-to-use design interface with drag-and-drop capability, users can collaboratively model, automate, monitor, and improve end-to-end processes.

Key features of webMethods BPMS include patented business activity monitoring (BAM), embedded process simulation, adaptive human workflow, a comprehensive metadata repository, and integrated business rules management, as well as codeless composite application development. Additional value is delivered via out-of-the-box integration with Software AG's comprehensive enterprise service bus (ESB), SOA lifecycle governance, and application modernization product offerings.

"Unlike niche BPM tool vendors that cannot support enterprise needs and large, un-integrated suite vendors that cannot deliver solutions quickly or empower the business to sustain their success, Software AG delivers an integrated, complete, enterprise-strength BPM solution that drives business results faster," Dr. Kürpick added.
