

**Press Release:**

**18.05.2015**

## High Power Multi-Channel Test and Simulation System for Energy Storage

The new multi-channel test and simulation system for energy storage saves energy and space by having up to 4 programmable output systems, which can be controlled independent from each other. Paralleling of the channels is possible. By using a common DC bus most of the power can be exchanged between the tested storage systems without using the grid.

Special solutions up to 500 kW 1000 V 1000 A are possible.
