Press Release

New IREB licence for Switzerland and China

4 September 2024

TÜV SÜD Academy now also approved as Certification Body for Requirements Engineering by the International Requirements Engineering Board in Switzerland and China

Munich. Requirements engineering is an important step in the development of software, systems or products. The International Requirements Engineering Board (IREB) developed the “Certified Professional for Requirements Engineering” certification scheme, or CPRE, for requirements engineering professionals. Since August, TÜV SÜD Academy has been approved as a certification body for this personnel certification in Switzerland and China.

“The Certified Professional for Requirements Engineering personnel certification in particular supports professionals from fields such as project management, agile and regulated environments, business analytics, testing, and requirements engineering to prove their expertise in this area”, says Tsvetan Donev, Head of the Certification Body for Personnel of TÜV SÜD Academy. “TÜV SÜD Academy has

now been approved as a certification body for the CPRE scheme, not only in India, but also in Switzerland and China. In these countries, there is strong demand for highly qualified requirements engineering professionals by companies embarking on complex projects. As a personnel certification partner with international experience, we are excited to now extend our offering of CPRE certification to these countries.”

What is requirements engineering?

Requirements engineering professionals play an important role throughout the development process. They are responsible for ascertaining, analysing, specifying, documenting, reviewing and managing the requirements for product development and their implementation within the scope of projects. By engaging in communication and exchanges of ideas and experience with all project stakeholders, they significantly contribute to the success of a project.

How to become a Certified Professional for Requirements Engineering (CPRE)

The IREB certification scheme covers four different levels for CPRE training and certification: Foundation, Practitioner, Specialist and Expert. At each level, professionals interested in the certificate can acquire the necessary knowledge in courses offered by selected training providers or online training courses or in self study. The final examination is then held exclusively by IREB-approved certification bodies, such as TÜV SÜD in India, China and Switzerland, using a list of exam questions provided by IREB. After passing the exam, the candidates obtain a CPRE certificate valid for an unlimited period.

Further information about the CPRE certificate is available at the [IREB](#) website or on TÜV SÜD's national websites for [Switzerland](#), [China](#) and [India](#).
