

IMO focuses with new website on lifting applications

IMO, experts for large diameter Slewing Rings and Slew Drives, headquartered in South Germany, just launched www.imo-lifting.com - a site which focuses on lifting applications.

Experts of lifting applications will be provided with all the relevant information and the ideal products for their application: The IMO Slew Drive. This ready-to-install unit offers as "Lift Upgrade" various additional values in comparison to the traditionally used slewing rings.

Manufacturers of manlift or articulated platforms, truck-mounted, light and mobile cranes, telescopic lifts, crawler tracks or slewable mast can find the information in 6 languages: German, English, Spanish, Portuguese, Russian and Japanese.

The new website can be found here: www.imo-lifting.de

About IMO

The IMO Group was founded 1988 and has more than 25 years experience in designing, manufacturing and supplying Slewing Rings and self-contained Slew Drives. The company is headquartered near Nuremberg in Gremsdorf, Germany. IMO has partners worldwide, a subsidiary in North Charleston, US and a representative office in Beijing. Currently worldwide more than 500 employees work for IMO.

IMO ball- and roller Slewing Rings are designed, manufactured and distributed worldwide in diameters ranging from 100 mm to 6,000 mm in a wide variety. They are used for various applications, including construction machinery, tunnelling & mining, ship building, conveyor & transportation systems and medical technology. Additionally, IMO is a leading supplier of blade, yaw and main bearings for on- and offshore wind turbines, and even provides blade bearings for a tidal stream system.

IMO Slew Drives consist of a ball or roller Slewing Ring, a drive train, and a completely enclosed and sealed housing. They are used for steering equipment such as gantry cranes and heavy-duty transporters, manlift platforms, turntables, agriculture & forestry and many more.
