New online tool available now

Online biogas calculator enables quick check for energy potential

PlanET Biogas Global just has published a brand new online tool, which enables framers to check out the energy potential of their substrates. The biogas project calculator is free of charge and provides its users a first impression regarding a suitable mix of substrates for an efficient biogas production. The new online calculator is available on the PlanET Biogas Global website now: <http://en.planet-biogas.com/biogas/biogas-calculator>.

Vreden, 6th May 2015: “During my daily consultant work I have realised that most farmers are interested in the energy potential of their available substrates, especially in the beginning of any planning”, reports Hanna Garbert, international sales consultant from PlanET Biogas Global. “Everyone, who considers developing a biogas project, is now able to quickly check out, if and in which size a biogas production is possible on his farm”, Garbert stresses out. The experienced sales consultant appreciates the brand new online tool and hopes the biogas calculator to become a helpful implementation for interested farmers. “This biogas calculator is a rough guideline for our clients, certainly we carry out concrete feasibility calculations in a following step in which country-specific regulations such as feed in tariffs are being considered”.

Background PlanET Biogas Group

The international operating PlanET Biogas Group is one of the leading providers for planning, construction, service and Repowering of biogas and biomethane plants. PlanET has developed the first solid feeder dedicated for biogas plants and offers technical solutions for the use of 100 percent manure or slurry and challenging substrates such as grass or straw. The gas storage PlanET Flexstore XXL received the INDUSTRIEPREIS 2013 as biogas is peak load capable and contributes in the security of supply. 2014 the German DLG honours the PlanET eco® twinfix sealing system with a silver medal. 230 employees work at the headquarters in Vreden (North-Rhine Westphalia). Further employees work at other international branches in Italy, Benelux, France, UK, USA and Canada. Globally PlanET has more than 360 biogas plants in the order of 40kW and several MW successfully realised.
