

## Delta Data Center Solution Day “Bringing Your Data Center into the IoT Era” Starts from March

*Delta Data Center Infrastructure Solutions will share market insights and optimized solution proposals for cloud and on-premise data centers with our key partners.*

Delta, a global provider of power and thermal management solutions, announced today that it will kick off its Solution Day World Tour in March under the theme of “Bringing Your Data Center into the IoT Era”. The purpose of this event is to share Delta’s insights and global success stories with key data center partners in this area. Starting from March, 2019, Delta will host its Data Center Solution Day in major cities in EMEA, Asia, and North America.

According to Gartner the research company, there will be 20 billion connected devices by 2020, up from only 8.4 billion devices in 2017. The rapid digital transformation known as the Internet of Things (IoT) is bringing huge volumes of data and massive data traffic, which further challenges IT infrastructure for real-time and always-on connectivity and services. Since data centers are the backbone of IT operations, how to build a reliable and efficient data center has become the focus of most companies’ IT strategies.

“The future is now. As industries prepare for the IoT, our job is to help our partners build reliable and future-proof data centers to counter their foreseeable IT challenges, while also maintaining lower TCO. We stand behind our partners to ensure they can leverage the latest technologies such as IoT and 5G technology into business profits,” said Dr. Charles Tsai, CTO of Information & Communication Technology Infrastructure Solutions Business Group (ICTBG) at Delta Electronics.

According to the latest survey of CIOs, the 3R challenges of Reliability, Resiliency, and ROI are causing them the most concern. Delta will provide an in-depth analysis of how each challenge affects data center industries, and equip our partners with unique insights and relevant success stories that will help them overcome these challenges step-by-step. Power capacity and system resiliency are two key considerations for data center builders and owners, which affect whether they decide their data centers will be on-premise, prefabricated or even colocations. With Delta’s broad industry experience, we are able to help our partners identify their business goals and requirements, and deliver optimized data center solutions.

Would you like to see how Delta’s data center infrastructure total solutions can bring real-world success? We invite you to join our Data Center Solution Day, where all VIP guests will enjoy exclusive access to our data center expertise, including market trends, solution capabilities, and global success stories. Don’t miss out on this opportunity to meet with our data center experts.

#### *About Delta*

*Delta, founded in 1971, is a global provider of power and thermal management solutions and a major player in several product segments such as industrial automation, displays, and networking. Its mission statement, "To provide innovative, clean and energy-efficient solutions for a better tomorrow," focuses on addressing key environmental issues such as global climate change. As an energy-saving solutions provider with core competencies in power electronics and innovative research and development, Delta's business domains include Power Electronics, Automation, and Infrastructure. Delta has 169 sales offices, 70 R&D centers and 38 manufacturing facilities worldwide.*

*Throughout its history, Delta has received many global awards and recognition for its business achievements, innovative technologies and dedication to corporate social responsibility. Since 2011, Delta has been listed on the DJSI World Index of Dow Jones Sustainability™ Indices for 7 consecutive years. In 2017, Delta was selected by CDP (formerly the Carbon Disclosure Project) for its Climate Change Leadership Level for the 2nd consecutive year.*
