

For Immediate Release

EgoSecure acquires FinallySecure by SECUDE

*Sergej Schlotthauer,
CEO of EgoSecure*

Ettlingen, 11.02.2014. – German endpoint security specialist EgoSecure acquires the full disk encryption business FinallySecure brand of **SECUDE AG**, a Swiss software manufacturer. This bold move establishes EgoSecure as a “one-stop shopping“ offering which includes all key components of the solution portfolio allowing extreme flexibility and response to new user requirements. For SECUDE, the Spinoff is a logical step in focusing on the strategy to develop innovative security solutions for SAP environments.

This acquisition of the disk encryption business creates a classical win-win situation for both [EgoSecure](#) and SECUDE as well as the two companies' large customer base.

“The decision to focus on the SAP security business with our new [Halocore technology](#) is the key business objective“, explains Dr. Heiner Kromer, CEO of SECUDE. “Keeping best interest of our FinallySecure customer base in mind, divesting of FinallySecure was not an easy decision. It was very important for us to find a partner who is able to meet the extremely high expectations of our customers when it comes to quality and innovative power and added value through the endpoint security focus, which EgoSecure offers.”

“By acquiring the full disk encryption solution by SECUDE we can offer now one of the leading-edge products in this segment with an excellent customer base. As endpoint security specialist, our plan is to continue to enhance the solution and to provide seamless integration with our other products. The combined technologies advances the effectiveness and usability of our all-round protection of sensitive data. The FinallySecure acquisition is one more important step on our way to expand our global market position“, says Sergej Schlotthauer, CEO of EgoSecure.

Dr. Heiner Kromer sums it up: “The purchase price reflects years of continuous efforts to develop and enhance the FinallySecure solution. For us, it is important to have EgoSecure as a highly-qualified partner who is able to provide maintenance and update services to our existing customer base, while developing and enhancing the product.“

Terms of the deal are not disclosed.

All additional information on how the solution will be integrated with the EgoSecure product portfolio is provided on the occasion of **CeBIT in Hanover, starting on March 10, 2014, in Hall 12, booth C39.**

About EgoSecure

With its comprehensive “EgoSecure Endpoint” security solution the security specialist with headquarters in Ettlingen near Karlsruhe (Germany) provides leading-edge technology to address endpoint security and endpoint management. EgoSecure maintains sales and technology partnerships all over the world to protect its 1,300 international business customers of all sizes and across all industries against data losses, malware, liability risks, productivity losses and related costs. Customers also include organizations with higher security requirements such as state offices of criminal investigation and banks.

EgoSecure stays in contact with its customers to develop solution concepts that allow for an easy and fast installation, feature an intuitive centralized administration concept and do not interrupt users’ workflows. The focus is always on the customer to ensure full acceptance and a high security standard.
