

SECUDOS

scope7 Open Source Appliances

Powerful Appliances preinstalled with Proxmox

scope7 Open Source Appliances

Ready to run Appliance with **PROXMOX**

Nowadays, intuitively operable security solutions for complex IT security problems are desired. Systems from different manufacturers are often used to solve the different tasks at the gateway. Especially when appliances are used the user binds himself permanently to a manufacturer in order not to endanger the high investment costs for the appliance, because usually the hardware of an appliance is not intended for changing the firewall software, but rather the software is precisely tied to the hardware of one vendor.

The Proxmox Appliances from SECUDOS provides the user the freedom to change, without increasing the complexity unnecessarily. In addition these new range of freedom guarantees a high degree of protection of investment. The user now is able to change the vendor of his firewall at any time, without endangering the company's hardware investments. With one click, not only the new firewall is selected and installed, but at the same time the solution for the private cloud keeps on running on the same platform.

For customers who do not have their own cloud yet, new paths open up to easily add various applications such as a complete groupware solution or the private cloud ECAS storage. Everything runs on a platform, on one appliance with a long-time support from SECUDOS. A solution designed for the future, but already available today.

SECUDOS Proxmox Appliances: The Advantages

Investment Protection

The SECUDOS Proxmox Appliances will not restrict you in any way. The own and flexible selection of software vendors not only gives you the opportunity to act freely, but also creates an investment protection for the future. Get rid of the often too expensive and rapidly outdated hardware systems of the software vendors, which are tied to only one purpose in many cases.

Multifunctional Solution

The SECUDOS Proxmox Appliances are a genuine multi-talent in every respect. Make yourself independent and open up unexpected opportunities to maximize your investments: Whether as firewall, groupware, file transfer unit or a combination of everything. The SECUDOS Proxmox Appliances can be used flexibly. The mapping of two firewalls in a row, for example, is possible without any problems.

Future-Proof Hardware

Unlike all-purpose servers, the SECUDOS Proxmox Appliances are specifically designed for their purpose. The internal bus systems are designed for high data throughput and VPN performance. Crypto accelerators at the CPU level or as independent hardware options increase the throughput considerably. LCD displays and / or LEDs provide the user with up-to-date system information. Through the direct connection within the Proxmox Appliances, all gateway solutions are designed in such a way they can communicate extremely fast with each other.

SECUDOS Proxmox Installer Gallery

The screenshot displays the SECUDOS Installer Gallery interface. At the top, there is a search bar and the title "SECUDOS Installer Gallery". Below this, a grid of 18 software installation cards is shown. Each card includes the software's logo, name, a brief description, and a "Install" button. The cards are arranged in three rows and six columns. The software listed includes ARP-GUARD, Barracuda NextGen Control Center, ESET REMOTE ADMINISTRATOR, SECUDOS ECAS, SECUDOS FTA, Reddox MailDepot, Tine 2.0, Untangle 13.1.0, pfSense CE-2.4.2, IPFire, OPNsense 17.7, CentOS 7, OpenSUSE Leap 42.3, Ubuntu 16.04.3 LTS Desktop, Ubuntu 17.10 Desktop, Ubuntu 16.04.3 LTS Server, Ubuntu 17.10 Server, and Zentyal Server 5.0. The interface also features a "scope7" logo in the top left and a "Log out" button in the top right.

The included Installer Gallery offers a wide range of predefined software solutions that can be installed with just a few clicks. The collaboration between SECUDOS and the partners in the Installer Gallery greatly reduces the effort for you, as all solutions have been validated in advance. Any software can be installed without great effort and know-how. Save yourself a lot of worries and install the desired solution with just one click.

SECUDOS Proxmox Appliances: The Advantages

Simple and Intuitive Administration

The SECUDOS Proxmox Appliances are partially pre-configured and will be installed and shipped ready to run. While some users dare to have their own installations, many others already rely on the Proxmox Appliances. Compability issues take time and energy. Get rid of them. The Proxmox Appliances make you independent and free. The integrated Installer Gallery allows you to quickly and easily install your desired software.

Can stand almost any price comparison

The extremely powerful hardware does not only impress with flexibility and a lot of features, but also in terms of a direct price comparison with other solutions. The costs of the SECUDOS Proxmox Appliances are fairly calculated and reasonable. There are only few order items for each appliance and rather no follow-up costs.

Energy Efficient

Instead of operating a separate device for each gateway solution, you can use the SECUDOS Proxmox Appliances to map your complete gateway landscape and also neighboring applications on only one system. As a result you will not only save money from the moment of purchase, but as well electricity costs during running operation.

BASIC

scope7-Proxmox-Basic

Key Features

- Intel® Core™ i5
- 16GB DDR4
- 1 x 480GB Intel server-grade SSD
- 1 x 64GB mSATA SSD
- 2 x USB 3.0
- 6 x GbE RJ45 ports

BASIC +

scope7-Proxmox-Basic+

Key Features

- Intel® Xeon® E3v6
- 32GB DDR4
- 2 x 480GB Intel server-grade SSD
- 1 x 64GB mSATA SSD
- 2 x USB 3.0
- 6 x GbE RJ45 ports
- 2 x SFP Ports

The scope7-Proxmox-Basic is offered in two configuration levels. In its entry level version, the scope7-Proxmox-Basic is equipped with an Intel® Core™ i5, 16GB DDR4 RAM, a 480GB Intel® server-grade SSD and a 64GB mSATA SSD. In addition, the device has an IPMI card installed. The second variant, the scope7-Proxmox-Basic+, uses an Intel® Xeon® E3v6, 32GB DDR4 RAM, two 480GB Intel® server-grade SSDs and also a 64GB mSATA SSD. The Plus version also uses IPMI and is especially designed for companies with high requirements.

BUSINESS

scope7-Proxmox-Business

Key Features

- Intel® Xeon® E5 (10 x 2,4GHz)
- 128GB ECC DDR4
- 2 x 960GB Intel server-grade SSD
- 1 x 64GB mSATA SSD
- 8 x GbE RJ45 ports
- 4 x GbE SFP+ ports
- Redundant power supply

BUSINESS +

scope7-Proxmox-Business+

Key Features

- Intel® Xeon® E5 (18 x 2,1GHz)
- 128GB ECC DDR4
- 2 x 960GB Intel server-grade SSD
- 1 x 64GB mSATA SSD
- 8 x GbE RJ45 ports
- 4 x GbE SFP+ Ports
- Redundant power supply

The scope7-Proxmox-Business is suitable for medium to large companies. The business version of the scope7 Proxmox appliances is also available in two expansion stages. The first expansion stage is equipped with an Intel® Xeon® E5, 128GB ECC DDR4 RAM, two 960GB server-grade SSDs and a 64GB mSATA SSD. The scope7-Proxmox-Business also has 4 SFP + ports and a redundant power supply. The Plus version of the Business version has similar features, but includes a stronger CPU for even more compute-intensive applications and more power.
