## A GENUINE SPORTS LIMOUSINE

Eibach suspension components for the new VW Jetta

With the new version of the Jetta, VW has provided plenty of driving enjoyment and presents the latest generation not just as a practical, but also an extremely sporty choice: after all on its debut - the first generation appeared in 1979 - the model was named after the "jet stream". The extensive Eibach suspension components, available from authorised dealers, suit the set-up perfectly.

The Eibach Pro-Kit Performance Springs provide a decent lowering, which makes the Jetta look like a sports limousine. Doing so does not, however, affect the comfort at all. With the Sportline Sport Performance Springs the centre of gravity is reduced further. This makes the Jetta look even more athletic.

Although they cannot be seen from the outside, the Eibach Anti-Roll Kit Performance Sway Bars also make a large contribution to the further improvement of the handling. Thanks to them the body roll of the vehicle on corners is considerably reduced. The aluminum Eibach Pro-Spacer Wheel Spacer are available if the sporty look of the Jetta is to be refined further.

All Eibach suspension components, which are available through authorised dealers, are provided with a high-quality corrosion protection and are TÜV-certified.

## PRODUCT DETAILS

# A GENUINE SPORTS LIMOUSINE

Eibach suspension components for the new VW Jetta

### Pro-Kit

- top-performance handling
- lower centre of gravity – lowers vehicle up to 40 mm
- progressive spring design
- excellent ride quality
- part of the Eibach Pro-System

### Sportline

- extreme performance meets extreme style
- race-car like handling
- progressive spring design
- excellent ride quality
- lowers vehicle up to 2" (50 mm)
- part of the Eibach Sport-System

### Anti-Roll-Kit

- reduction of body roll when driving in curves and during fast changes of direction
- unimpaired spring comfort at bilateral spring deflection
- decreasing the load difference between the wheels inside and outside the curve
- impacting the under- or over-steering tendency positively (auto-steering behaviour)

### Pro-Spacer

- widen your stance – for better handling and appearance
- made from high-tensile-strength aluminum alloy
- exact fitment by using minimal production tolerances, resulting in exceptional wheel balance
- all applications tested in rigid durability- and fatigue tests
- high-grade corrosion protection through a special coating process (salt spray test according to DIN 50021)
- significant weight advantage compared to wheel spacer made from steel
