+ + + + + Junction box Westlake passes salt mist test + + + + +

Multi-Contact's Westlake junction box (PV-JB/WL-H) has successfully passed the salt mist spray test according to DIN EN 60068-2-52:1996. The Westlake has been certified by both TÜV and UL.

The flat build of the j-box (120×116×23mm) enables the installation directly underneath the module frame, saving valuable time in the installation process. The connection is made by either welding, soldering or clamping. The Westlake is available pre-assembled with our PV connectors MC3, MC4 and MC4PLUS.
