

Press release

CH-Allschwil, 4 June 2010

+ + + + + Multi-Contact at the AUTOMATICA 2010 + + + + +

Multi-Contact again exhibits at the International Trade Fair for Automation and Mechatronics AUTOMATICA, taking place at the Neue Messe München from 8 - 11 June.

Participating in the initiative „Green Automation“, we will show you the advantages of our unique, particularly energy-efficient MC Multilam Technology in regard to resource-saving, environmentally sound automation.

We are pleased to present you the new, user-friendly connector FL3-Servo-Power-6+PE, an addition to our Dockingline product range. The simplified handling, thanks to interchangeable contact inserts, saves time during maintenance and repair.

Another economic solution in every respect is our primary circuit connector RobiFix: its compact design saves space and material. Moreover, the easy installation without special tools reduces the assembly time.

The modular connector system CombiTac allows the individual combination of various types of contacts in a compact connector. New in the range: modules for high voltages, high currents and glass optical fibre cables.

Further, we are happy to inform you about the manyfold possibilities of customized solutions for various fields of application.

The complete press kit is available at our stand A2.405 or from the following contacts:
