

Contributing to improve efficiency and reliability in energy distribution
Real-time adjustment of any tariff to dynamically deal with changing conditions

Paderborn (Germany), 25 October 2011: Due to energy efficiency mandates, smart meter deployments will be driven above the 100 million mark by this year, state leading analysts and research. Especially the APAC region is significantly deploying smart meters; also Australia and New Zealand began massive installations of smart meters at the end of the last decade. As a result, electric utilities are driving their deployments of the devices, trying to increase visibility and management of electricity usage; therefore they must involve communication networks and integrated intelligence. The key lies within an IT based solution which provides dynamic tariff capabilities to improve the efficiency of energy generation, distribution and usage. Orga Systems' OS.Energy provides the crucial real-time communication capability – the foundation of tomorrow's smart energy solution.

Dynamic Energy Billing is the key

Smart meters play a significant role in energy efficiency initiatives, Australia is extending in Automated Metering Infrastructure (AMI) and New Zealand seems to be progressing towards the development of a national smart metering initiative. To facilitate this uptake Orga Systems, #1 choice for real-time charging and billing, brings real-time rating capability and multi dimensional tariff dynamics to smart metering utilities and CIS infrastructures. The solution offers utility companies an unparalleled tariff flexibility that easily copes with managing complex tariffs in real-time. This feature helps energy companies to deal with dynamically changing conditions in a completely new way, adjusting any tariff through measuring and monetizing customer energy consumption in real-time.

Additional revenue through an end-to-end energy solution

Smart metering and real-time billing as well as new customer interaction capabilities are essential. Offering new services to customers and bringing real-time customer experience into play are opportunities to unlock new streams of revenue. The end-to-end energy solution by Orga Systems is able to integrate promotion capabilities such as long-term campaigns and instant promotions considering targeted bonus, bundle or discount schemes.

Learn more about Orga Systems and meet us at Booth No. 31 during the Smart Utilities Australia & New Zealand at the Sydney Convention & Exhibition Centre, Sydney from Nov. 8th until Nov. 10th.
