New brochure:

Piston rings for combustion engines

Piston rings have been around for as long as combustion engines themselves. Nevertheless, among specialists and users there is still a widespread lack of knowledge or an incomplete understanding of piston rings. No other component is so critical when it comes to loss of power and oil consumption.

The new brochure from MS Motor Service International GmbH looks at the subject of piston rings from a user's perspective. It focuses on practical issues and provides advice to ensure efficient repairs of used engines. In addition to a basic technical section, the practical "Installation and Service" section contains detailed information about fault free installation and replacement of piston rings. The brochure also includes useful information on related topics such as lubrication, oil consumption and running in the engine.

Successful repair and reconditioning using new piston rings is not difficult provided you understand how things work together inside the engine. Motor Service highlights the things that are necessary to achieve successful repairs, but also what can happen if certain rules are not followed.

The brochure is available from bookshops in the following languages by quoting the specified ISBN numbers:

ISBN 978-3-86522-491-0 - German
ISBN 978-3-86522-494-1 - Spanish
ISBN 978-3-86522-493-4 - French
ISBN 978-3-86522-492-7 - English
ISBN 978-3-86522-495-8 - Russian
ISBN 978-3-86522-497-2 - Polish
