CH-Allschwil, 23 November 2010

+++++ On the safe side with Multi-Contact +++++

Multi-Contact's new publications in different languages provide information on the latest changes in the IEC/EN 61010-031 safety requirements for test and measurement and answer frequently asked questions.

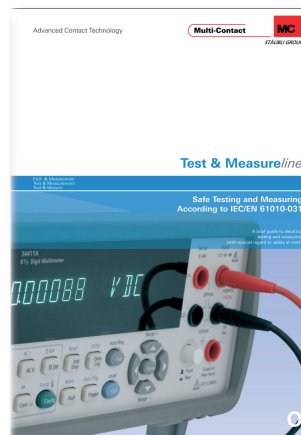

In March 2011, significant changes will come into effect in the IEC/EN 61010-031 safety requirements for test and measure accessories. The new flyer S Test & Measureline by Multi-Contact gives a quick overview of the most relevant issues in both German and English.

Due to high demand, our popular pocket guide „Safe Testing and Measuring According to IEC/EN 61010-031“ is now also available in English and French. It provides useful advice on the latest safety standards, measurement categories and the safe use of MC test accessories.

Both publications can be ordered for free from Multi-Contact.
