

Medical AI: NEXUS AG and Rhenus agree to a strong partnership for further growth

The AI-based solution provider Medical AI Information & Analytics GmbH and NEXUS AG, a Europe-wide specialist in hospital information systems and software solutions for diagnostics, have entered into a strategic partnership. The aim is to further develop innovative solutions for the healthcare sector and drive growth together.

As part of the close partnership, Medical AI will continue to operate independently. In future, NEXUS AG as the majority shareholder* and Rhenus will jointly support Medical AI on its growth path.

The respective strengths of both companies have been pooled in order to utilise synergies and drive forward the innovation of AI-supported solutions in the hospital environment.

'Our goal is to continue to develop AI solutions that make healthcare more efficient through continued scaling,' says Claudia Hobohm, Managing Director of Medical AI.

Dr Ingo Behrendt, CEO of NEXUS AG, adds: *'The Medical AI team and products are a great addition to our international portfolio: Acceleration and automation of billing as well as the integration of AI are exactly what our customers are looking for.'*

The cooperation will enable the seamless integration of modern technologies into existing infrastructures in order to optimise hospital processes and sustainably improve patient care.

* Clearance by the competent merger control authorities is still required before the transaction can be finalised.'

About Medical AI Information & Analytics GmbH

Founded in 2019, the Berlin-based start-up Medical AI Analytics & Information GmbH develops multidimensional AI solutions for hospitals and offers complementary services. With a wide range of products - from Codr® for AI-based billing coding and conspicuity analyses for optimised clinical decisions to all-in-one solutions - as well as customised consulting and implementation services, the focus is on improving patient care.

About NEXUS AG

NEXUS AG develops and distributes software solutions for the international healthcare market. With the clinical information system (NEXUS / HIS) and the integrated diagnostic modules (NEXUS / DIS), they have a uniquely broad product range that can cover almost all functional requirements of hospitals, psychiatric clinics, rehabilitation and diagnostic centres within their own product families. The focus of product development is on easy-to-use process support systems that increase efficiency and safety in patient treatment. NEXUS employs around 2,000 people, has its own sites in ten countries and supports customers in a further 26 countries via certified dealers
